

**Editor's comments:**

1. Objectives should be revised as recommended.
2. Spelling of behavior should be same at all places.
3. In table 2 what does mean by significant increase or insignificant increase of usage of condom, kindly clarify.
4. Kindly use the word usage in place of use of condom.
5. When it is shown below the table that significant level is  $p < 0.05$ , then it is not required in text.

**Author's feedback:**

- Objectives have been revised as recommended. The study was carried out to describe the pattern of condom usage among Nigerian youths, to identify any socio-demographic factors that could be associated significantly with condom use among the youths.
  - The spelling of behavior has been made the same
  - Significant/insignificant has been deleted. Table 2 only describes increase or decrease in condom usage among the youths.
  - Use of condom has been changed to condom usage appropriately.
- $P < 0.05$  has been removed from the text.
