

SDI Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_46595
Title of the Manuscript:	Occurrence of Anthracnose Disease of Turkey Berry (<i>Solanum torvum</i>) at Bunso, Eastern Region, Ghana.
Type of the Article	Original research paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Studies that involve causal agent of diseases are of extreme importance, as they serve as strategies to mitigate negative impacts on culture, as well as evaluate the potential to infect other species. It is important to emphasize the negative impacts on the production in pepper and eggplant caused by anthracnose disease that reinforce the importance of this study. Another point that should be better highlighted is the relationship between <i>Solanum torvum</i> and pepper and eggplant being used to increase disease resistance in these species and the impacts of all these species being hosts of the pathogen. It is also important to mention the reference of inoculation concentration used of 1×10^3 per ml.	
Minor REVISION comments	As mentioned by the authors the disease is favoured by air humidity and temperature, then it would be important to demonstrate these characteristics in the places where the disease occurs in the country, being able to demonstrate the average over the years in the places. Or else, demonstrate the time (months) when the characteristics are favourable for the development of the pathogen in places that disease occurs in the country.	Comments are incorporated in the revised manuscript in terms of annual mean rainfall and mean temperature of the study area.
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
