**PART 2:**

<b>FINAL EVALUATOR'S comments on revised paper (if any)</b>	<b>Authors' response to final evaluator's comments</b>
<p>The theme dealt here is important. The authors involved my suggestions into this version. Making 6 categories to examine patients' satisfaction may be useful in some settings. Generalization, if it had been made, may have improved the paper quality further; however, the present data may be of some use to making batter medical policy in this area.</p>	<p>We accept that this data can be generalised to apply to similar settings particularly in south east Nigeria. <b>Thanks for this useful correction. See last sentence of discussion.</b></p>
