General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none"> - It is important to develop a more detailed introduction to the proposed theme, addressing the epidemiological aspects, clinical and histopathological characteristics, treatment and prognosis. - It is essential that the histopathological images in the case report show a better quality. - It is important to inform in the case report if the patient agreed to the development of the present case report through the signature of the consent term. 	<p>The introduction has been reviewed and updated in line with reviewer's comment, efforts were made to address some epidemiological aspects, clinical and histological characteristics, treatment and prognosis. Additions were highlighted in yellow colour</p> <p>This is the best quality for now,</p> <p>It is of note that the patient signed a written informed consent</p>
Minor REVISION comments	<ul style="list-style-type: none"> - Important to finalize the case report ... Has the patient been followed up? for how long? was there complete remission of the disease? - It is important to seek to identify newly developed studies that may contribute to this article, thus making it a truly up-to-date work. Recent articles have been developed on this subject (eg Mugahid et al., 2019 - DOI: 10.1016 / j.amsu.2018.11.015). 	<p>She has not returned for review after a single dose of praziquantel was given</p> <p>Thanks for this, this new study was noted and used in the development of this case report</p>
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p> <p>It is important for the authors to indicate whether the patient in the present case report agreed on the use of their case for the development of the scientific article, by signing the informed consent form.</p>
