

EDITORIAL COMMENTS:

This manuscript described a study on the Multi-Drug Resistant and Plasmid-Mediated Quinolone-Resistant *Salmonella enterica* isolated from Shellfish in Iko Creek, Nigeria. Discussion is very superficial. Manuscript was not written well. The objectives of the research were not well designed and executed. The results were not well presented as discussed. It was written too simple for a scientific research paper. Pay attention to the reference order.

AUTHORS' FEEDBACK:

Thank you editor for your comments on manuscript Ms_JAMB_46892.

The author has the following observations:

- Having effected all the MINOR corrections pointed out by the 3 reviewers (Cf. SDI. Review Form 1.6), I now say that the manuscript was well written.
- The discussion reflects the result obtained from this research.
- The manuscript has the major objectives of this research which was perfectly designed and executed.
- The results were well presented bearing in mind the reviewers comments.
- Yes, the manuscript was written in clear and simple language as a good scientific research should be hence, the write up should convey the message not entertain readers.
- I have gone through most journals from this domain, and it carries this referencing style. If different, please kindly indicate for correction.
- Thanks

Udoekong, Nsikan Samuel
