

Editor's Comments:

I read the original manuscript, comments from reviewers, feedback from authors and reviewed version of manuscript more comment from Editor 1.

In the manuscript I found some mistakes the number of references in the text are superscript; accord JAMMR should be between brackets [].

Also the sections and subsections are not numbered.

There is not any table.

I think that should be some tables sociodemographics variables from the sample, main results etc.

There are minor mistakes and the manuscript is good

I think that authors could correct it.

Author's Feedback:

We have add table and made all the changes.
