

Editor's comments:

- The selected doses of the tested compounds have to be explained .
- Basic clinical observations and health status data have to be addressed.
- Part of results are presented in the material and method section (see table 1).
- The discussion is scanty. Limitations and clinical implications should be added to the study.
- List of references does not follow the instruction for authors =

Author's feedback:

Thank you very much for your comments. We tried to adjust some parts which you mentioned above. Moreover, we corrected and eliminated grammatical mistakes of the manuscript language. Thank you one more time!
