PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Increased uric acid and hypertension are components of the metabolic syndrome, may be both attributed to the same underlying pathophysiologic mechanism (such as obesity and insulin resistance) and have been shown to co-exist in several metabolic abnormalities. Moreover, the present study is cross-sectional and cannot support conclusions on causal relationships. It would be interesting to re-examine this population, following drug-correction of hyperuricaemia, in order to check whether there will be a decline in blood pressure values.	Authors very much appreciate the comments of the reviewers. We tried to improve the quality of the manuscript based on the thoughtful comments of the reviewers. We have thankfully acknowledged the contribution of the reviewers in the acknowledgement section of this manuscript.
<u>Minor</u> REVISION comments	1. There are many syntactic and grammatical mistakes. The manuscript has to be checked by a native English speaker. 2. There are no Units in the parameters shown in Figures 1-3.	Corrections have been done.
<u>Optional/General</u> comments
