Are there ethical issues in this manuscript?	<p><u>(If yes, Kindly please write down the ethical issues here in details)</u></p> <p>Yes Informed consent was obtained from each participant prior to data collection. Respondents were informed that participation was voluntary and refusal to participate will not affect care. The participants were assured that they were free to discontinue at any point during the process of the interview without effect on their care. The research was not harmful, the participants who agreed to participate only experienced a minimal discomfort when blood sample (5mls) was being taken for investigation by the researcher. The consulting room set apart for the interview was private and all interviews was conducted only if privacy was ensured. All respondents had an evaluation of their blood pressure as well as estimation of their body mass index with counselling on healthy lifestyle using a standard protocol. Their fasting blood sugar and fasting lipid profile (total cholesterol and high density lipoprotein) were also done free of charge. Confidentiality of the information given was ensured. The names of participants were not used in order to maintain confidentiality. Only serial numbers were allocated to the participants.</p>	<p>Respondents were informed that participation was voluntary.
