<u>Compulsory</u> REVISION comments	This descriptive retrospective study analysed the prevalence of different histotypes of thyroid carcinoma and their relative frequency in dependence on age and sex in a sample of Nigerian patients during the period 2008-2018. Given the dramatic increase of thyroid cancer in the last few decades over the world, and the number of factors that can potentially exert a direct disrupting effect on the thyroid, this paper provides an important contribution to the field and deserves to be published. I point out only minor revisions as typos and other comments in the text under track changes mode.	Thanks you Sir for the valuable review. All errors have been corrected and highlighted in yellow . Thanks again.
