EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>That is the text of the author about the preparation of the extracts</p> <p>Preparation of Plant Extracts</p> <p>The crude ginger and garlic extracts were prepared according to the method described by Ogodo and Ekeleme [11]. The ginger and garlic were peeled and washed separately. They were then cut into smaller pieces, weighed and blended in a sterile blender. The blended juice was filtered through a sterile muslin cloth after which the filtrates were purified by passing through Millipore membrane filter paper.</p> <p>Even they use a method that is used by other authors, in the present work, plant materials are used in different time and collection. The application of the method sure are going to give different results.</p> <p>To can evaluate really the doses that cause the antimicrobial activity, it is necessary to determine at least the quantity of total solid present in the different extracts to can achieve the real quantity of chemical components evaluated in the different combination of the extracts the authors evaluate.</p> <p>It is for me the most important thing to take on account for to validate the results of the present paper.</p> <p>For me if still it is missing.</p>
