

**Editor's Comment:**

To minimize the number of Tables: Table 2 can be introduced into the current Table 3 and current Table 4 into Table 5.

Please, also review the grammar and punctuation.

It is a pity that the manuscript does not contain any Figure. The authors should value the inclusion of any representative Figure.

**Author's Feedback:**

All grammatical concerns have been looked into and edited as requested by the editor. Also, as much as I agree that some tables could be coupled, I am also of the strong opinion that each of the the tables in this manuscript are clearly serving explainable purposes as currently presented vis a vis ease of understanding of the discussion for the readers of the journal, logicity of presentation as well as making it easier to refer to each of the tables. Also, any attempt to change the current arrangement of the tables would lead to entirely changing the whole manuscript considering the fact that our discussion in this manuscript derived its logic from each of the tables presented. I therefore conclude that the tables should be left intact having passed through the technical acceptance of the reviewers.
