PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This paper reported a detailed study on changes in dietary intake and anthropometric parameters in University students during the 15-day-New Year period. There is an increase in adiposity and body components. Unfortunate diet intake could not be the factor leading to these changes, as pointed by the authors, the lack of exercise and actives is another important factor effecting these changes It would be more positive to set up a control group with intensive exercise after the short-holidays to see whether or not these increase could be reversed.	Sure, It was better to evaluate the physical activity but since the subjects were absent during holiday we could not asses it.
Minor REVISION comments		
Optional/General comments
