

Editor's comments:

I suggest the authors to :

1. remove word "molecular" from the title of the manuscript
2. remove "hsp" part from manuscript.
3. add more sample figures (at least 10 with its corresponding controls) on micronuclei, mentioning magnification.
4. Authors have to add some figures (at least 10 with its corresponding controls) at 1000x magnification about RBC (red blood cells) in separate image file (.png/ .jpg/ .tiff).

Author's feedback

1. All information or contents related to the molecular aspect of this study have been removed.
2. We have included more sample figures at 100x in a separate image file as supplemental data.
3. The cells were viewed at 100x. There was a typographical error in the materials and method. We have corrected this error and highlighted the correction. 1000x has been changed to 100x in the materials and methods.
