

Editor's Comment:

The below mentioned paper is interesting, both from theoretical and specially practical point of view as it deals with an important problem of the prevalence of toxoplasmosis among HIV patients and role of radiological investigation in the diagnosis of this complication. Taking into account that the version 2 of the manuscript has been significantly improved according to the comments of the reviewers and consequently it has been accepted by both reviewers, in my opinion the paper could be published in Microbiology Research Journal International as Original Research Article after making a serious correction of references according to JAMB style: in the text of the manuscript the citations should be indicated by the reference number placed in square brackets, for example [5] and the example of proper style of presentation of the bibliography in references list is placed below.

1. Hilly M, Adams ML, Nelson SC. A study of digit fusion in the mouse embryo. Clin Exp Allergy. 2002;32(4):489-98.

Only the first six authors should be listed followed by et al.
