Influence of Service Brand Communication on Behavioral Intention Special Reference to the Private Professional Educational Institutes in Batticaloa District

ABSTRACT

Service Brand Communication plays a crucial role in determining the Behavioral Intention towards the brands, which is useful for business and it provides the values to consumers as well. This study examined whether Service Brand Communication has an influence on Behavioral Intention in Private Professional Educational Institutes as research problem. This research was carried out with an objective to examine the influence of Service Brand Communication on Behavioral Intention in Private professional Educational Institutes in Batticaloa District. Personal Interactive Communication and Marketing Mix Communication are considered as the measurement variables of Service Brand Communication and Behavioral Intension is considered as the dependent variable. 200 students from 07 Private Professional Educational Institutes in Batticaloa District have been selected as sample base on the stratified proportionate random sampling method for this study. Data were analyzed and evaluated by Descriptive statistic, Correlation and multiple regressions analysis. Findings have shown the Service Brand Communication and Behavioral Intention is at high level. Moreover, it also found that there is a strong positive relationship between Service Brand Communication and Behavioral Intention. Service Brand Communication significantly influences the Behavioral Intention of Private Professional Educational Institutes. Results of this study suggest that the Service Brand Communication is important to examining the dispositional source of Behavioral Intention.

Keywords: Service Brand Communication, Behavioral Intention

INTRODUCTION

Background of Study

In marketing field, the discussion about communication began in the early 1990s. Though there are different opinion, most scholars view marketing communication as Service Brand Communication rather than Marketing Mix Communication of single product or activity. For schultz (1993), brands are central to this integrated marketing. For Keller (2001), marketing communications represent the voice of a brand. As branding increases in importance, it appears that brands play a particularly crucial role in the

marketing of services. Turley and moore (1995) advocate that due to the difficulty in service evaluation, the service brand name becomes a crucial component of the brand and important source of information to the consumer.

Schiff man and kanuk (1994) said that Consumer's Psychology consists of basic concept of psychology which decides individual's behavior and influencing consumption's behavior. According to the psychologist john watson perspective, everything is considered a behavior. So, all of our thoughts, actions, and feelings are behaviors, and they're caused by external stimuli. The first perspective used in consumer psychology is behaviorism.

In today's higher education landscape, college and university leaders may well consider principles of brand management to assure their positions regarding their competitors. Higher education leaders may derive guidance to manage effectively what may be the most important intangible asset a college or university owns its long-term image and bundle of core meaning. Debra Grace and Aron O'Cass (2005) said students brand attitudes encapsulate the meaning that they attach to brands, which in turn effects their purchasing behavior. Therefore, positive brand attitudes are vital to the long-term success and sustainability of service brands of educational institutes. As such, astute educational institutes expend considerable effort on creating and maintaining positive attitudes towards their brands and this is usually achieved through the Brand's Communications. However, how Service Brand Communication influences consumers, most researches of which have focused on product rather than service brand. . For the private educational institute, it is important to understand the impact of Service Brand Communication on Behavioral Intention

and Thus, this paper concentrates the influence of Service Brand Communication on Behavioral Intention

(Qiu Wei 2001).

Research Problem

It is necessary for the marketers to determine as to whether Service Brand Communication influences Behavioral Intention in their business. As far as the researcher knows few research has been conducted so far in Sri Lanka to examine whether Service Brand Communication leads to Behavioral Intention with special reference to Private professional educational institutes. Thus, there exists a clear knowledge gap. This knowledge gap becomes a problem to marketers in acquiring consumers. Absence of such knowledge makes marketers in Private Professional educational institute unclear and difficult to satisfy expectations of the customers. Therefore, researcher examines this problem in this study and attempts to fill this knowledge gap. Therefore, the following research problem is advanced in this study.

"Does Service Brand Communication influence the Behavioral Intention with special reference to Private Professional Educational Institutes in Batticaloa District?"

Research questions

The following research questions are advanced in this study.

- 1. What is the level of Service Brand Communication in Private Professional Educational Institutes?
- 2. What is the relationship between Service Brand Communication and Behavioral Intention?
- 3. Whether Service Brand Communication influence on Behavioral Intention in Private Professional Educational Institutes?

Objective of the Study

The specific objectives of this study are given below. These objectives have been derived from the research questions and purpose of the study.

- 1. To identify the level of Service Brand Communication in Private Professional Educational Institutes.
- 2. To find out the relationship between Service Brand Communication and Behavioral Intention in Private Professional Educational Institutes.
- 3. To investigate the influence of Service Brand Communication on Behavioral Intention in Private Professional Educational Institutes.

LITERATURE REVIEW

The concept of Service Brand Communication

Kempf and Smith, (1998) said Brand communication should aim to enhance brand loyalty by making consumer more attached to the brand in order to strengthen the consumer's brand relationship over time. It is the most important factor for successfully launching a new service.

(Turley and Moore, 1995) indicates that brand names should not be overlooked as a valid and useful avenue of communication in the creation of brand attitudes. As competition amongst service brands is increasing, service providers, as well as service designers are starting to realize the importance of having a strong corporate brand.

Strong service brands allow customers to better visualize and understand intangible services. They also reduce customer's perceived risk of buying services, which are difficult to evaluate prior to purchasing the service (Berry, 2000). However, many service companies fail to consider all the touch points where customers interact with the service brand.

In fact, as pointed out by Stern (1983, p. 53), "a good brand name can save millions of dollars over the product's life because it carries its own meaning, describes the product's advantages, is instantly recognized and serves to differentiate the product significantly from other competitors".

In addition, in the context of services, brand names are argued to be a crucial component of the brand and important source of information to the consumer because, in many cases, service attributes are difficult to communicate via other means (Turley and Moore, 1995).

Areas of Service Brand Communication

Personal Interactive Communication

A consumer's process of information acquisition relies on both external and internal information sources that together influence his or her overall brand equity judgments and brand choices. A traditional theoretical foundation of the relationship between communication and brand attitude, we expect the two forms of communication to directly affect brand equity and brand attitude. The framework illustrates that consumers compare communication stimuli with their stored knowledge of comparable communication activities. Brand communication positively affects brand attitude as long as the message creates a satisfactory customer reaction to the product in question compared to a similar non-branded product (Yoo, Donthu, and Lee 2000). Moreover, communication stimuli cause a positive effect in the consumer as a recipient; therefore, the perception of communication positively affects an individual's awareness of brands.

Marketing Mix Communication

Integrated marketing communication (IMC) is one of the most controversial areas of research, the concept marking a constant progress from the simple coordinating of promotional tools to a complex strategic process. Identifying the communication pathways which influence consumer behaviour is an essential marketing communications activity, the ultimate goal being the creation of marketing messages to reach target audiences through the most appropriate channels. Adopting the approach according with IMC is not part of the marketing mix, but a holistic concept using marketing mix elements to create and strengthen relationships with consumers and to send a unified message, this paper aims to clarify some aspects of the mechanism of IMC influence on consumer behavior, reflected also in the buying decision process.

Concept of Behavioral intention

The affective component of attitude refers to emotions and drives engendered by the prospect of performing a behavior. This is in contrast to the instrumental component of attitude, which refers to a

more cognitive consideration of the extent to which performing a behavior would be advantageous (e.g., Breckler & Wiggins, 1989).

One response to these observations has been to include measures of anticipated affect (i.e., what respondents would expect to feel about the consequences of a behavior) as predictors of intention (e.g., Parker, Manstead, & Stradling, 1995; Richard, de Vries, & van der Pligt, 1998; Sheeran & Orbell, 1999). Generally, these measures have improved the prediction of intention beyond that of standard variables (for a review, see Conner & Armitage, 2001).

An alternative approach is to examine anticipatory affect (i.e., how respondents feel about performing the behavior, not how they feel about the likely consequences of that behavior; Loewenstein, Weber, Hsee, & Welch, 2001).

The literature on brand extensions alone has amassed more than a hundred studies in leading journals and has identified numerous factors that affect how consumers feel toward a given brand extension. These factors have included: overall fit (Aaker & Keller,1990; Bottomley & Holden, 2001; Milberg, Sinn, & Goodstein,2010); type of brand (e.g., prestige or functional) (Monga &John, 2010); brand knowledge (Broniarczyk & Alba, 1994); positive affect (Adaval,2003); brand attachment (Fedorikhin, Park, & Thomson, 2008); mood (Barone, Miniard, & Romeo, 2000); and involvement (Barone, 2005). Low and Lamb, Jr (2000) defined word of mouth and publicity in the services domain, the study investigates the effect of communications on service consumers' aroused feelings and attitudes towards service brands they use. Low and Lamb, Jr (2000) Defined as "the consumer's overall evaluation of a brand – whether good or bad" brand attitudes encapsulate the meaning that consumers attach to brands, which in turn effects their purchasing behavior.

Although controlled communications and brand name showed positive relationships with brand re-use intentions, uncontrolled communications showed a negative relationship. This suggests that when the time comes for consumers to act, or think about future actions towards the brand, information derived from all communication sources is used to determine future behavioural intentions.

CONCEPTUALIZATION AND METHODOLOGY

Based on literature survey following conceptual framework was developed. This conceptual framework establishes link between Service Brand Communication and Consumer's Psychology.

Figure 3.1 : Figure Conceptual model

Service Brand Communication

- Personal Interactive Communication
- Marketing Mix Communication

The figure depicts the relationship between Service Brand Communication and Behavioral Intention. According to figure, Service Brand Communication and Behavioral Intention are the constructs. Brand Communication can be measured in terms of two variables that are Personal Interactive Communication and Marketing Mix Communication as recommended by Zeithaml & Bitner (2003). Therefore, Personal Interactive Communication and Marketing Mix Communication are considered as independent variables. Meanwhile Behavioral Intention can be considered as dependent variables. Hence above conceptual framework establishes links between the variables of Brand Communication and with the Behavioral Intention.

Behavioral Intention

Methodology

Researcher applied quantitative methodology for this study. Thus, survey method has been adopted.

Sample Selection

Sri Lankan academic sector comprises of 2 major categories, namely Government Institute and Private Institute. As at June 2016, there were 07 registered Private Professional Educational Institutes in Batticaloa District. This research is limited to the Private Professional Educational Institutes in Batticaloa District, thus 200 students from those 07 institutes were considered as the sample based on stratifies proportionate random sampling method. Hence researcher distributed questionnaire to students of those institutes.

No	Registered Private professional educational institutes	Number of Students	Proportion	Number of Sample selected
1	BCAS institute	160	16%	32
2	E Soft College	210	20%	40

Table 4.1 Sampling Framework

	Overall	1030	100%	200
7	Oxford College	120	12%	24
6	HBS College	100	10%	20
5	ICBT Campus	90	9%	18
4	Headway College	150	14%	28
3	IVL Campus	200	19%	38

Data Collection Methods and Instruments

This study was carried out based on primary data. Structured questionnaire was used to collect data. The Questioner comprised of statements on dependent and independent variable. Questioner was given to the 200 students those who from 07 institutes in Batticaloa District.

Likert scale of 1-5 which ranges from "Strongly Disagree" to "Strongly Agree" were applied in the questionnaire to identify responses. The numerical values were given for the purpose of quantification of quantitative variable as follows:

- 1. Strongly disagree
- 2. Disagree
- 3. Neither Agree nor Disagree
- 4. Agree
- 5. Strongly agree

Data Presentation, Analysis and Evaluation

Data has been presented using tables. Meanwhile descriptive analysis was used for data analysis. Hence under the descriptive analysis, mean and standard deviation were derived from the analysis of 172 samples. In inferential analysis, correlation and multiple linear regressions have been applied. Statistical package of SPSS 16.0 has been used for this purpose. Furthermore criteria shown in table were adopted to evaluate mean values. This was established to determine the degree of Service Brand Communication.

Range	Decision attributes
$1 \le Xi \le 2.5$	Low level
2.5< Xi ≤3.5	Moderate level
$3.5 < Xi \le 5.0$	High level

ANALYSIS AND FINDINGS

Sample Profile

Researcher selected 07 registered private professional educational institutes in Batticaloa district, which consist of 200 students from those 07 institutes were considered as the sample based on stratifies proportionate random sampling method. 172 students were responded to the questionnaires and the distribution of responded institutions have been presented in table 5.2.

No	Registered Private professional educational	Number of Students	Proportion	Number of Sample	Number of respondents	Response rate
	institutes			selected		
1	BCAS institute	165	16%	32	27	84%
2	E Soft College	210	20%	40	37	93%
3	IVL Campus	200	19%	38	35	92%
4	Headway College	145	14%	28	17	61%
5	ICBT Campus	90	9%	18	17	94%
6	HBS College	100	10%	20	18	90%
7	Oxford College	120	12%	24	21	88%
	Overall	1030	100%	200	172	86%

Source-Data analysis

Descriptive statistics

Univariate analysis was carried out for evaluating the attributes of variables individually based on the responses. Here, the frequency, mean values and standard deviation of variables were considered. Mean values have been distributed based on Liket's scale of between 1-5 which represent "Strongly Disagree"

to "Strongly Agree". Meanwhile mean values were evaluated based on already established evaluative criteria which range from "Low level" to "High level".

Findings and discussion of Service Brand Communication in Private professional educational institutes in Batticaloa District

This section provides findings and discussion on Service Brand Communication in Private professional educational institutes in Batticaloa District in order to meet the first objective of this study which is the examination of the Service Brand Communication.

Mean	Std. Deviation
4.19	0.59
4.04	0.65
4.11	0.55
	4.19

Source-Data analysis

As presented in table 5.3, all Service Brand Communication variables have taken mean values of more than 3.5 which fall under the evaluative category of high level. From the analysis of survey, it has the Mean level of 4.11 and Standard Deviation as 0.55. In addition, most of the respondents expressed the common opinion regarding the Service Brand Communication (SD = 0.55)

This was to explore the level of each Service Brand Communication dimension (Personal Interactive Communication and Marketing Mix Communication) Private professional educational institutes in Batticaloa District. Univariate analysis was performed to find out the results.

Findings confirmed that Personal Interactive Communication has the mean of 4.19 and Marketing Mix Communication with the mean value of 4.04. Private professional educational institutes in Batticaloa District are having high level of Service Brand Communication since the mean value of Service Brand Communication construct is 4.11. It clearly shows that the Private professional educational institutes use its Brand Communication in a high level to attract and retain the students towards their Institutes.

Relationship between Service Brand Communication and Behavioral Intention.

Correlation values were found to determine relationship between variables of Service Brand Communication and Behavioral Intention. It has been presented in the table

Variables	Correlation with Behavioral Intention
Personal Interactive Communication	0.508**
Marketing Mix Communication	0.644**
Service Brand Communication	0.656**

Table 5.4 correlation between the variables of Service Brand Communication and Behavioral Intention

**. Correlation is significant at the 0.01 level (2-tailed).

As shows in table 5.4 all correlation values are positive and these values have been highly significant at 1% significant level (P<0.01). This reveals that all Service Brand Communication variables are strongly positive correlated with Behavioral Intention. Hence there is a strong positive relationship between Service Brand Communication and Behavioral Intention.

Analysis on the influence of Service Brand Communication on Behavioral Intention

This section analyses the influence of Service Brand Communication on Behavioral Intention. In this study the outcome or value of dependent variable (Behavioral Intention.) depends on more than one independent variable (Personal Interactive Communication and Marketing Mix Communication). Therefore, to quantify the effect of different independent variables on the behavior of dependent variable, it is necessary to apply the technique of multiple regressions (cooper & schindler, 2007; levin & rubin, 1991).

In multiple linear regression analysis adjusted r square statistics as well as regression coefficient are considered to be important for analysis and interpretation. Adjusted r square represents the amount of variance in the dependent variable that can be attributed to independent variable (cooper & schindler, 2007). Meanwhile the regression coefficient (value of b) implies the change in the outcome (dependent variable) resulting from a unit change in the independent variable (cooper & schindler, 2007). Hence Behavioral Intention can be analyzed using the multiple regressions.

	Model	В	Sig
1	(Constant)	1.248	.000
	Personal Interactive Communication(PIC)	0.221	.002
	Marketing Mix Communication(MMC)	0.485	.000

Table 5.5 Influence of Service Brand Communication on Behavioral Intention

Adjusted R Square value 0.440

F statistic 68.179

The coefficient table provides the significant value for all the variables and these values indicate that Personal Interactive Communication and Marketing Mix Communication have significantly contributed to the behavioral intention. These predictions have been significant at p value of 5% (p < 0.05). As revealed by Adjusted R Square statistic, 44% variance in behavioral intention can be explained by Service Brand Communication.

Hence, the equation for behavioral intention can be written as follows:

Behavioral Intention = 1.248+ 0.221 (PIC) +0.485 (MMC)

F value statistics is 68.179 which indicate that this model can be accepted. Hence it can be derived that Service Brand Communication significantly influences on Behavioral Intention.

Theoretical contribution

This research has proven that Service Brand Communication significantly influences Behavioral Intention of the Private professional educational institutes in Batticaloa district. It has been further found that components of Service Brand Communication (Personal Interactive Communication and Marketing Mix Communication) also have the significant impact on Behavioral Intention. Thus, Personal Interactive Communication and Marketing Mix Communication determine the Behavioral Intention of the Private professional educational institutes in Batticaloa district. Hence this study has provided findings to fill the knowledge gap. In addition to the theoretical contribution, this study has also measured the degree of Service Brand Communication as well as extent of Behavioral Intention of the Private professional educational institutes in Batticaloa district. These findings will be useful to the Directors and Managers of the professional educational institutes to develop their brand among the students who are willing to follow the professional course in future.
