

Geoengineering: The Deadly New Global “Miasma”

ABSTRACT

Near-total adherence to false scientific theories is the striking parallel between 19th century miasma theory associated with cholera, dispelled by Dr. John Snow, and 21st century “miasmas”, namely, the anthropogenic-carbon-dioxide-cause of global warming theory, and its “cure” by geoengineering, undisclosed jet-spraying particulate pollution into the troposphere. An image published in the New York Times in 2017 began a series of discoveries that pointed to particulate pollution, not carbon dioxide, as the principal cause of global warming. Both industrial and deliberate jet-sprayed particulate pollution heat the atmosphere and thus reduces atmospheric convection-efficiency, which retards heat loss from earth’s surface and causes global warming, concomitantly wreaking havoc on human and environmental health. Today’s “bad air,” rather than spreading contagion, is causing a pandemic of non-communicable diseases (NCD’s) and decimating our natural environment. Covert tropospheric aerosol geoengineering, especially utilizing coal fly ash, is a primary catalyst for both of these modern disasters, and it must be recognized and halted. Air pollution is the leading environmental cause of disease and death in the world. Combustion products of fossil fuels are major contributors to both global warming and air pollution. The causes of air pollution and associated runaway global warming are modifiable in a short time-frame by reducing industrial and geoengineering particulate pollution. However, corrective actions hinge on a scientific paradigm-shift and international cooperation at all levels of authority. The modern “miasmas” of complacency encompassing the universal dangers of air pollution and the deadly code of silence on the subject of undisclosed geoengineering must be dispelled if we are to have a “fighting chance” to confront these global public health emergencies. Despite Snow’s ground-breaking work, the stubborn belief in “miasma” as the cause of infectious disease persisted well beyond his death into the 20th Century; our time is much too short now to delay changing course.

Keywords: Aerosols, coal fly ash, geoengineering, particulate pollution, pandemic, global warming, precautionary principle

1. CHALLENGING THE 1854 CHOLERA “MIASMA” CONSENSUS

One hundred sixty-five years ago, the obstetrician, Dr. John Snow, was able to have the handle removed from the Broad Street water pump, a life-saving step that helped stem the deadly 1854 London cholera epidemic, and changed the course of medical history. Snow deduced that contaminated water from sewage dumped into rivers and cesspools near town wells spread the disease. He worked around the clock during the cholera scourge to track down information from hospital and public records to determine whether the victims lived nearby and drank water from Soho’s Broad Street pump. Snow’s mapping locations of the fatal cholera cases showed a clear association with proximity and use of this water source [1].

Snow’s assertion that fecal-polluted water, not an air-borne contagion, was the agent that spread cholera blatantly contradicted the prevailing miasma theory. The miasma theory held that most, if not all disease, was caused by inhaling “bad air” infected by the stench of rotting vegetable or animal material [2].

The medical establishment was highly critical of Snow’s theory that cholera was spread by polluted water. Public officials thought his hypothesis was nonsense. The Board of Health issued a report that stated, “we see no reason to adopt this [Snow’s] belief,” and there was a refusal to clean up the cesspools and sewers. The founding Editor of *The Lancet*,

Thomas Wakley, was an outspoken critic of Snow. A scathing editorial in *The Lancet* in 1855 suggested that Snow had “fallen into a gully-hole and should be left there” [3]. *The Lancet* later published papers by Snow and his supporters, and many decades later apologized for failing to recognize his remarkable achievements in epidemiology [4].

Snow’s theory was finally proven 25 years after his death, when Robert Koch, one of the fathers of the Germ Theory of Disease, identified *Vibrio cholerae* as the cause of the disease, and additionally showed that it was transmitted by the fecal-oral route.

2. GLOBAL WARMING “MIASMA”

The origin of epidemiology in Snow’s work on cholera provides a dynamic model of etiological research combined with community intervention to curb an epidemic and prevent further disease. But just as important today, is the “back story”, the medical establishment’s adverse reaction to Snow’s radical understanding. The relevancy here relates to a new, potentially more devastating public health threat and new “miasmas” attributed to its cause and cure.

In 1988 a new scourge against humanity was identified, and the drums beat loudly to warn the global population about the threat. Unlike biological pandemics before, this one was thermal in origin. Humanity, it was said, was causing global warming by excessive fossil-fuel combustion that was adding heat-trapping carbon dioxide to the atmosphere [5]. But what was unsaid was that a coterie of scientists and politicians had decided to take action against the new scourge without public consent. They had identified a new miasma, carbon dioxide [CO₂], as the cause, and launched an undisclosed cure, a second new miasma, the far more devastating cure of adding jet-sprayed pollution particles to the troposphere.

Few, if any, new ideas have been as thoroughly instilled in human consciousness as the idea that carbon dioxide, the product of human fossil-fuel combustion, is causing global warming which, if unabated, will wreak environmental havoc. Although it had begun much earlier, by about 2010 jet-sprayed particulate trails became a near-daily, near-global activity, especially in the skies above the British Commonwealth, the European Union, and North America (Fig. 1).

Fig. 1. Geoengineering particulate trails with photographers' permission. Clockwise from upper left: London, England (Ian Baldwin); Paris, France (Josefina Fraile); Sanremo, Italy (Rosario, Marcianó); San Diego, California, USA (author JMH); Calgary, Alberta, Canada (Dan Pelletier); Geneva, Switzerland (Beatrice Wright).

3. CODE OF SILENCE

A strange *omertà* – the code of silence – pervaded officialdom, including the scientific community. Like the mainstream news media, atmospheric and climate scientists avoided considering the consequences of, or even mentioning, the very obvious atmospheric manipulation [5], and misleading claims were made that the aerial particulate-trails are just harmless ice-crystal contrails [6]. But the most disquieting pervasive *omertà* in our experience was and is perpetrated by the medical and public health community.

As credentialed professionals we have submitted for publication Commentaries warning of the global health risks of the tropospheric particulate aerial spraying to the *Bulletin of the World Health Organization*, *The Lancet*, and *Environmental Health Perspectives*, the latter being a publication of the U. S. National Institutes of Health. In each case the Commentary was rejected without benefit of peer-review. One of us (JMH) submitted a manuscript to the *Proceedings of the National Academy of Sciences (USA)* [PNAS] entitled "New Evidence of Aerosolized Toxins in the Lower Atmosphere". Instead of the manuscript being sent out for peer review, the PNAS Editorial Board flatly rejected the paper because it "lacked the broad appeal necessary for further consideration by the journal."

There is a widespread, concerted effort, presumably by the intelligence community, to deceive the public and the scientific, medical and public health communities into believing the toxic particulate trails are harmless ice-crystal contrails [7]. Their operatives were responsible for coercing editors of public health journals to retract two peer-reviewed and published public health articles without ever allowing the author (JMH) see and respond to their allegations [8,9]. Moreover his reputation has been smeared on disinformation websites and his Wikipedia page marginalized and perverted.

But fortunately, as U.S. President Abraham Lincoln allegedly said, "You cannot fool all of the people all of the time."

4. GEOENGINEERING "MIASMA"

Forensic scientific investigations revealed that the undisclosed aerial particulate composition is consistent with coal fly ash, the toxic waste product of industrial coal burning which forms in just the particle-size needed for spraying [10]. This is the second modern miasma, deliberately spraying pollution particles into the air to control the malady of global warming. The establishment now, as in Snow's time, is dead wrong: Aerosol pollution causes global warming instead of curing it [11-13], and its consequences are deadly [14].

The observations that led to the disclosure of the modern miasma mistake began with an image on the front page of the January 19, 2017 *New York Times*, a global surface temperature presentation showing a bump, coincident with World War II (WW2). Inspired by that image, Bernard Gottschalk [15,16] applied sophisticated curve-fitting techniques and demonstrated the bump is a robust feature evident in eight independent NOAA databases. The bump, Gottschalk concluded, "is a consequence of human activity during WW2" [15].

Inspired by Gottschalk's work [15,16], Herndon [11-13] realized that two WW2 consequences were potentially capable of altering the sun-earth radiation balance to cause global warming: Particulate pollution and CO₂. Pollution proxies track well with Gottschalk's curves (Fig. 2).

Fig. 2. Copy of Gottschalk's fitted curves for eight NOAA data sets showing relative temperature profiles over time [15] to which are added proxies for particulate pollution. Dashed line: land; light line: ocean; bold line: weighted average. From [11].

Atmospheric carbon dioxide (CO_2) can be ruled out as the cause of the thermal peak coincident with WW2: Antarctic Law Dome Ice core data during the period 1936-1952 show no significant increase in CO_2 during the war years, 1939-1945 [17]. Moreover, rapid cessation of WW2 global warming is understandable as tropospheric pollution-particulates typically fall to ground in days to weeks [18], while CO_2 remains in the atmosphere for decades [5].

Recently, we published evidence from the 1980 Mt. St. Helens volcanic eruption that supports the concept deduced from the WW2 data, namely that particulate pollution inhibits heat loss from the surface of Earth by decreasing the efficiency of atmospheric convection [19].

Like the 19th century miasma, the modern climate science community has the wrong culprit. Particulate pollution, not CO_2 , is the principle cause of global warming [11-13]. Particulate pollution heats the atmosphere [13], not cools it as usually assumed [5]. Global warming occurs because the particulate-heated atmosphere reduces convective heat loss from Earth's surface [13].

Today's miasmatisms have mounted a massive effort to stem wrongly-presumed CO_2 global warming through undisclosed "geoengineering", the near-daily, near-global jet-spraying of particulate-pollution into the troposphere (Fig. 1). But instead of cooling, the deliberate aerial pollution causes additional global warming, climate chaos, and deadly human and environmental problems. Officialdom seems not to notice what is happening before their very eyes.

5. CONSEQUENCES AND RESPONSIBILITIES

As the Director-General of the World Health Organization recently noted [14], the simple act of breathing is killing seven million people a year and injuring billions more. "No one, rich or poor, can escape air pollution", he acknowledges, "Despite this epidemic of needless, preventable deaths and disability, a smog of complacency pervades the planet." However, the situation is even more calamitous than the Director-General realizes or admits.

Aerosolized coal fly ash, unfiltered from industrial smokestacks as well as deliberately jet-emplaced in the troposphere, is a significant risk factor for COPD and respiratory disease [20], lung cancer [21], and neurodegenerative disease [22] and is potentially a major agent in the globally-catastrophic demise of insects [23], birds [24], and forests [25]. It is an activity that poisons the planet with mercury [26], damages the ozone layer that shields us from harmful solar ultraviolet radiation [27-30], exacerbates wildfires [31], and does yet untold damage to the web of life on Earth.

In the instance of a naturally occurring biological public health risk, such as avian flu, it would be unimaginable for virtually all medical and public health journals to ignore the contagion, to turn a blind eye, as they do regarding the geoengineering-emplaced particulate pollution of the air we breathe.

One of the essential medical public health functions is the proper diagnosis and investigation of health hazards in the community [32]. The Precautionary Principle in Public Health asserts that the public should be protected from preventable health risks even before the full extent and level of exposure is known. Essential elements of the Precautionary Principle include taking preventive action in the face of uncertainty, shifting the burden of proof of safety to proponents of the activity, and exploring alternatives to the harmful action [33].

Removing the handle from the Broad Street water pump marked the beginning of the end of 19th century miasma. Removing the handle from the pump today means halting the aerial spraying and removing *omertà* – the code of silence – from the medical, public health, and scientific communities. Doing so will begin to bring an end to modern miasma-madness, dispel the "smog of complacency", and lead to vastly improved planetary public health.

6. CONCLUSIONS

The origin of epidemiology arising from John Snow's work on cholera provides a dynamic model of research on causation combined with public health intervention to help curb an epidemic and prevent further disease. It was necessary for Snow to employ basic scientific principles develop his hypothesis that cholera was spread by contaminated drinking water and not by airborne contagion, or "miasma," which was the prevailing view. Today it is more important than ever to correct such scientific mistakes. New evidence suggests that particulate pollution, not atmospheric carbon dioxide concentration, is the primary cause of global warming.

It is well-known that air pollution is the leading environmental cause of disease and death in the world. Combustion products of fossil fuels are major contributors to both global warming and air pollution. Today's "bad air," rather than spreading contagion, is causing a pandemic of non-communicable diseases (NCD's) and decimating our natural environment. Covert, "hidden in plain sight" tropospheric aerosol geoengineering operations, especially those utilizing coal fly ash, are a primary catalyst for both of these modern disasters. These operations must be recognized and halted.

The causes of air pollution and associated runaway global warming are modifiable in a short time-frame by reducing industrial and geoengineering particulate pollution. But these corrective actions hinge on a scientific paradigm-shift and international cooperation at all levels of authority. The modern "miasmas" of complacency encompassing the universal dangers of air pollution and the deadly code of silence on the subject of undisclosed geoengineering must be dispelled if we are to have a "fighting chance" to confront these global public health emergencies. Despite Snow's ground-breaking work, the stubborn belief in "miasma" as the cause of infectious diseases persisted well beyond his death into the 20th Century; our time is much too short now to delay changing course.

COMPETING INTERESTS

The authors declare no competing interests.

CONSENT

Not Applicable.

ETHICAL APPROVAL

No human or animal subjects were involved.

COMPETING INTERESTS DISCLAIMER:

Authors have declared that no competing interests exist. The products used for this research are commonly and predominantly use products in our area of research and country. There is absolutely no conflict of interest between the authors and producers of the products because we do not intend to use these products as an avenue for any litigation but for the advancement of knowledge. Also, the research was not funded by the producing company rather it was funded by personal efforts of the authors.
