Optional/General comments	<p>The bean ball production proved to be a profitable enterprise in the study area. Nevertheless, the efficiency and profitability would be improved if the constraints identified by the study are addressed as it will encourage many more people especially young, active and viable individuals, to venture into the enterprise.</p> <p>The producer should make use of source of heat that emits little or no smoke such as gas cooker and kerosene stove for the safety of their health and eyes. Rehabilitation and construction of access and feeder roads within the study area and formation of cooperative groups by the producers in order to regulate market prices of products and improve access to government and other non-governmental credit facilities will sustainably enhance the producers profit and livelihood</p>
