PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Good original research paper fit for publication by AJAEES. However, several corrections need to be made on the paper to bring it to publication standard.</p> <p>First and foremost, the Geographical coordinates (latitude and longitude) of the study area should be provided. And if possible, a map of the study area should be given to permit a visualization of the area under study.</p> <p>Secondly, the data analysis procedure and statistical software used for data analysis should be provided. This will permit the readers/other researchers to know if the data analysis procedure and statistical software used, suited the collected data.</p> <p>Thirdly, plausible justifications should be proffered regarding the findings of the study. It doesn't just suffice to describe the findings of the study. Thus the findings should be presented in an analytical manner, not merely in a descriptive fashion.</p> <p>Equally the findings of the study have been poorly discussed. The findings of the study should be described in a comparative fashion i.e. comparing and contrasting the findings of the study with the findings of other authors who have conducted related research. Thus, the author(s) of the study should imperatively seek for many recent research works (2014 – 2019) related to the subject matter of the study and use it to discuss the findings of the paper.</p>	
Minor REVISION comments	More recent publications should be sought for and used at the level of the introduction as well as in discussing the findings of the paper.	
Optional/General comments	Good original research paper fit for publication by AJAEES. However, the aforementioned comments and evaluations should be taken into account before the paper is considered for publication.
