**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<ol style="list-style-type: none"> <li>The title should include "hematotoxicity" as you studied.</li> <li>The sample size of 5 rats per group for quantitative analyses is quite small.</li> <li>The hematological findings are unclear. You should explain why the reducing in the number of red blood cells did not lead to a low hematocrit, why the MCH and MCV were increased by codeine, and why rbc, wbc, and platelet counts were reduced. In your discussion, you only mentioned similarity of your results with the previous reports and the impacts of these reductions. As a reader, I prefer to know why the codeine could reduce these parameters.</li> </ol>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
