PART 1: Review Comments

	Reviewer's comment	Author's comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	**In this short communication, the authors document the relationship between a marker for bone density (expressed as fraction of creatinine in urine) to underdeveloped growth in newborns. Their findings are interesting, however seem preliminary and somewhat anecdotal. This is due largely to the small sample size, the skew towards male infants and the fact that mothers in this study who give birth to smaller babies are shorter and lighter individuals themselves. The study as is can therefore not be accepted for publication.**	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Are there ethical issues in this manuscript?	*(If yes, Kindly please write down the ethical issues here in details)*
