PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The present work addresses the effects of ingestion of a popular brand of a drink on rats. The effects are evaluated considering renal, liver and reproductive function. The introduction is very relevant and the methodology is applicable to the raised question. The considerable problem is that the work loses a little of the scientific characteristic when it questions a specific brand of drink, with defined commercial name. And still considering a high dosage of intake for animals that would not be subjected to this naturally. The result of the work has more commercial impact than ceintifico. The argument for this kind of approach is not very clear.</p> <p>Ethical approval:</p> <p>There is no ethics committee number</p>	
Minor REVISION comments		
Optional/General comments
