

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_46192
Title of the Manuscript:	The association of Cord blood telomere biology with mother's education
Type of Article:	ORIGINAL ARTICLE

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>It is unexpected that the authors did not give enough attention to the previous review report.</p> <p>Authors did not attend to some of the queries including sample size calculation. The evidences are all over the article and include most especially:</p> <p>1. Methodology: poor. Since you were originally interested in influence of education before commencement of the study, a case-control approach will be more scientific. The study design is unacceptable for the objective of the study. It appears that the article was a second thought after data collection, otherwise you should have taken care of the central focus of your study from the design stage. It is not scientific to compare two groups with 174 and 76 participants. It is skewed.</p> <p>2. Results: especially table 2 is a wrong comparison which yielded a misleading data.</p> <p>3. Discussion: since the results are wrong, the discussion cannot be correct.</p> <p>4. References: only references 1, 6, 11, 17, 20, 24, 27 and 28 are correct despite an earlier comment. Errors include listing of author names- some have up to 8 names listed while you also have 3 names followed by et al. There is clearly a wrong use of et al, punctuation marks and use of capital letter especially in journal name. This is not VANCOUVER.</p>
