Manuscript Number:	Ms_JEAI_48286
Title of the Manuscript:	INDUCTION OF SENESCENCE AND FOLIAR ABSCISSION IN APPLE TREES WITH THE USE OF ABSCISIC ACID
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:
(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The manuscript has a reasonable theoretical foundation, but it assists in the understanding of what it is to be presented. I believe that we should focus more on applying ABA in the Introduction. The authors write a paragraph on the effect of nitrogen on plnta. I think the same should be withdrawn.	
Minor REVISION comments	The methodology, though simple, is well written. It tells you all the details of the Search. The results are well presented and understandable. I felt the foliage a little in the discussion of the results. There is a lot of comparison between the results. Authors should discuss more based on Search.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
