SDI Review Form 1.6

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p><b>SOCIO – DEMOGRAPHIC VARIABLES AND EFFECTS ON FAMILY LIFE IN OBU DU URBAN, CROSS RIVER STATE, NIGERIA</b></p> <p>I read this manuscript and I think it could be an acceptable text if certain aspects are clarified and corrected. The subject is interesting. In any case, I congratulate the authors for their effort. I suggest that, please, the authors verify the following comments:</p> <p><b>-Sample and sample size:</b> Please provide a flowchart.</p> <p>Was the sample size calculated for the comparison of the results between the groups? What were the hypothesised values of mean or differences between groups to calculate the size of the sample?</p> <p>The authors could provide all the statistical parameters of their samples.</p> <p><b>-Questionnaire:</b> Was its reliability and validity re-evaluated after translation? What was the reliability and validity of this questionnaire?</p> <p>[Translation of a scale: In addition to using rigorous translation and evaluation methods to ensure cultural equivalence, the psychometric properties of the instrument should be ensured in each culture or country where it is to be used, including item-scale correlations (Cronbach's alpha), comparisons of responses, the correlation of the scale with an existing gold standard or other similar instruments and the analysis of the psychometric properties of the instrument in relation to the subgroups of the population of interest]</p> <p><b>-Age groups:</b> Why are these age groups chosen?</p> <p>The classes that classify the age groups are not the usual and could hinder the comparison with other studies. "Grouping should be mid-decade to mid-decade or in five-year age groups (e.g. 35–44 or 35–39, 40–44, etc, but <i>not</i> 20–29, 30–39 or other groupings)". For example, it can be seen more in: Age in epidemiological analysis. J Epidemiol Community Health 2003;57:397. <a href="http://jech.bmj.com/content/57/6/397.full">http://jech.bmj.com/content/57/6/397.full</a></p> <p><b>-Conclusion:</b> It is important in any scientific paper to point out the problems that, from the current essay or study, are still pending solution or clarification.</p> <p><b>-References:</b> Review, please, the rules of the Journal.</p>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments		

**PART 2:**

**SDI Review Form 1.6**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Are there ethical issues in this manuscript?</b>	<i>(If yes, Kindly please write down the ethical issues here in details)</i>	

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
