Change is needed. 4) In the Materials and methods section, details statistical formula of the genetic variability, phenotypic, genotypic and environmental coefficient of variation, heritability and genetic advance, correlation, path coefficient and genetic diversity must be provided along with the name of the scientist. 5) In results and discussion section, provide the name of authors you referring beside the reference number. 6) Recheck the path analysis table. 7) Residual effect of path analysis must be explained. The interpretation of the residual value must be there in your literature. 8) Provide suitable conclusion. 9) Reference no 45 scientist name will be Panse instead of Panes.
