

Editor's Comment:

I have seen the article "Biostratigraphic and Paleoenvironmental Characterization of Cretaceous Carbonate Deposits in the Eocene Offshore Sedimentary Basin, Côte d'Ivoire", and I have read the reviewer's reports. One reviewer recommends to accept the paper as it is, and the other gave minor corrections. The author responds well and did the requested corrections. I can put general comments on the paper as follow:

- Page 2, No need to another introduction and the subtitle can be changed to geological and structural setting of the study area, since the content is talking about that.
- For Fig. 1, there is no legend for the given geological and structural map.
- There are typo errors in the article, it has to be re-edited.

My recommendations:

Based on the reviewer's reports basically, I recommend to accept the paper for publication, considering the above mentioned comments.
