

Editor's Comment:

"Mood State and Behavior Predictions in Social Media through Unstructured Data" is a well-structured and interesting work, much improved by the author having followed the advice of the reviewers who did an excellent job. The built model is coherent and interesting. It will be necessary to refine it by deriving consequences from its results when confronted with its practical applications.

Since the intended field of application is very interesting, it is necessary to take into account that the results obtained can be used maliciously, as has been very recently evidenced, and therefore it is necessary to have ethical principles with regard to their use.
