

Editor's Comment:

The manuscript was evaluated and recommendations were given below. The manuscript can be published after making the following corrections.

- 1) Statistical analysis method should be given at the end of the material and method section
- 2) In Table 2 "annus", should be corrected as "annuus" .
- 3) In results and discussion sections should be avoided in repeat the concentrations (0,25,50,75 and 100%).
- 4) only one new literature has been added. It would be better if more recent literature could be added
