

Editor's Comment:

I agree with the reviewers who requested picture/ photography of the parasites in this kind of presentation. In fact photos of clinical presentation of urticaria also need to be shared as well.

For case report presentation, supports from photos are needed as it lacks statistical analysis to establish scientific link between factors and the disease/infection.

If photos are declared not available, I suggest NOT to publish this article.

In conclusion, I suggest reject the article due to inadequate information
