

### **Editor's Comment:**

Thank you for asking for my editorial decision on this manuscript titled: Intra-operative detection of asymptomatic perforated Copper T: a case report. This manuscript at stage 4 (receipt of revised paper version 2 and author's feedback) is clear, well written and presented and will be of value to readers of this journal. The manuscript is faced with a lot of typographical errors which must be corrected before publication. **Please accept for publication after these corrections.**

My comments are:

1. There are lots of spelling mistakes (typographical errors). Line 8: surrounded (surrounded), embedded (embedded), Line 9: attempting (attempting), Line 13: laparoscopy (laparoscopy), Line 16: perforated (perforated), Line 18: minilaprotomy (mini-laparotomy), Line 38: laproscopic ligation (laparoscopic ligation), Line 54: pomeroy's (Pomeroy's), Line 81: diarrhea (diarrhoea), Line 92: Acknowledgement (Acknowledgement).
2. This case report should contain the name of the city (town) and country where this procedure was carried out in the case report section of the manuscript. The authors should not say in a government hospital only. The city (town) should also appear in the key words please.
3. The keywords should be: perforation, contraception, copper T, city(town)
4. A lot of double spaces appeared in between words: Line 30/31 recurrent..urinary tract infection, Line 32: symptomatic., Line 38: All..her, Line 48: laparoscopy,..cu T, Line 51: Supra pubic..3-5cm, Line 52: left..cornu, Line 55: and..injectable, Line 56: day 7., Line 76: symptoms,..it is, Line 82: removed..immediately, Line 84: potentially..had, Line 87: our..patient.
