

Dear editor;

I have not seen any improvements in the article

Abstract

The abstract should be concise and informative. It should not exceed 300 words in length. It should briefly describe the purpose of the work, techniques and methods used major findings with important data and conclusions.

The abstract is 149

Keywords

Immediately after the abstract, about 4-8 keywords should be given.

No key words at all in this submitted article.

Introduction:

How it comes references started from 22??????

1.1 Background

Klebsiella pneumoniae and *Streptococcus pneumoniae* are among the common causes of Respiratory Tract Infections (RTIs) globally especially in children and immune compromised individuals²² Worldwide, Respiratory Tract Infections (RTIs) are the largest cause of death in children, causing two to four million deaths each year, with the highest incidence in developing countries³. RTIs are normally associated with cough² *K. pneumoniae* and *S. pneumoniae* were indicated to be among the leading causes of pneumonia¹⁶. Commercial antimicrobial drugs are usually used in treatment of RTIs and this has led to increased multiple drug resistance of microorganisms due to their indiscriminate use worldwide²⁴. In addition, antibiotics are sometimes associated with adverse effects on the host such as immune suppression, vomiting, nausea, and hypersensitivity⁷. Although the proportion of people living within 5 kilometers of a health care facility in Uganda rose to 72% in 2010 from 49% in 2000¹⁵, access to facilities is still limited by poor infrastructure, lack of medicine, lack of accommodation at facilities, shortage of medical human resource among other factors that constrain access to quality service delivery in rural areas¹⁸. As a result, a large portion of rural population resort to the use of herbal extracts which are thought to be safe, cheaper and accessible²⁷.

Reference style: this is the correct style; if you see in the introduction parts the author did not follow the journal style at all.

Comment [s1]: ???????

Comment [s2]: ?????

Comment [s3]: ????

References must be listed at the end of the manuscript and numbered in the order that they appear in the text. Every reference referred in the text must also present in the reference list and vice versa. In the text, citations should be indicated by the reference number in brackets [3].

References style still the same as before and no corrections were made.

The journal names must be abbreviated according to the journal guidelines.

The author should care about this work
