

Editor's Comment:

I would like to inform you that I will not accept the paper entitled "Improvement of the efficacy an WHO alcohol-based hand rub formulation by reducing isopropanol content and associating Syzygium aromarticum and Piper nigrum essential oils" in this form. The authors are required to do the following modifications:

- The paper needs proofreading and editing.
- This study is an experimental study, therefore, it should be hypotheses, which should be tested in order to be accepted or rejected. It is better to add hypotheses.
- It is necessary to include ethical considerations and reference number.
- Citation in references, the references should be e.g., (1, 6, 7). Or (17-22), no need to mention all numbers.
- Results and discussion should be in separate headings e.g., 3- Results; 4- Discussion
- It is necessary to add recommendations and limitations.
