

Editor's Comment:

Please go my recommendation and comments as below.

My recommendation would be to accept the paper after these minor corrections.

1. Last line of introduction- "this could shed light on how effectively control the parasite as well as reduce morbidities in endemic communities."

Please add "to" after effectively

2. Discussion- "2008 also reported significantly higher infection intensity in boys." Please replace intensity by severity.

3. Discussion- "The lower prevalence in students aged 21years and above could be becauseas children grow older, they frequent streams for activities and so when the worms within them died naturally as S. haematobium adult worms have been reported to live on the average for 3-10 years (Wilkins,1987)." The message is not clear. Please delete the underlined portion of the sentence for clarity.
