

### **Editor's Comment:**

Taking into consideration the reviewers' comments, the revised manuscript as well as the authors' feedback, I recommend the paper to be accepted for publication after some improvements were conducted.

More specifically, the authors should:

- properly respond to "Mam" reviewer's comment in regards to the units they use, following the journal guidelines,
- properly respond to "Kam" reviewer's comment in regards to the "Mean score calculation formulae" - think to give a definition of procedure where it is necessary,
- because the sample size is too small they should be conscious when they use the percentage. For example, they should add the absolute numbers in the most important cases instead of using percentages alone.
- properly rework the abstract eliminating some numbers that nothing add, while these confuse the reader.
- conduct a language editing.
