

**Editorial Comment:**

I have two points to interfere:

- 1) In the keywords, avoid same terms from title.
- 2) The results are interesting, but do not corresponding to the title, since a correlation test (statistic) was not made. Therefore, a correlation test should be included in the study, or the title should be changed.

**Author Response:**

Thanks for Editorial Comment:

- 1) Corrected in the text of article
- 2) Title of article was corrected and highlight with yellow colour.
