EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
I just have a minor revision suggestion. The data should be presented with column percentage in Table 1 not row percentage.	The column percentage has been used in Table 1 to determine the overall scenario of total respondents for adherence to vaccination appointment. The article has been written on the basis of these results however we are very much appreciating your comments regarding the same. We will work on it to update the same in our next manuscript.
