

EDITOR'S COMMENT

Some corrections have been effected by the author, however some are yet to be effected e.g

1. Those by Gam reviews concerning questions of not using molecular genetics and PCR for characterization. Also that of shortening the conclusion section.
2. That of Nan reviews concerning non- inclusion of *aeromonas*, *vibrio cholera* and *campylobacter* isolations, which was made under compulsory revision comments

Author's Feedback: Molecular characterization was not done because of limited funds. Conclusion section has been corrected/shortened.

Campylobacter, V. cholera and aeromonas have been excluded.
