Compulsory REVISION comments	<p>This research is well designed and has reliable information that would assist development of intervention strategies in the place of research.</p> <p>Abstract: See comments in text.</p> <p>Introduction: Well reviewed. It would be good to state the pap smear practice in the place of research so as to reflect on the findings (frequency of pap smear, information about if there is an existing health guidelines).</p> <p>The objective is clear.</p> <p>Methods:</p> <p>This is a cross sectional study – the sample is heterogenous, both health and non-health related subjects are included , if a difference is to be statistically determined , sample calculation need to show this. This will also help when data is analysed and commented on.</p> <p>Recruitment of subjects: elaborate on how they are recruited-any bias</p> <p>The aim would be to develop intervention strategies using the results derived.</p> <p>Kindly include Inclusion and Exclusion criteria - perhaps we will exclude those who have not engaged in sexual practices.</p> <p>Results:</p> <p>Tables and figures are well illustrated.</p> <p>Discussion.</p> <p>The general discussion is well written. The concluding paragraphs should have some valuable comments based on the findings- refer to Fig. 4 and reflect on how information provision and practice can be influenced.</p> <p>References: well formatted and written- comprehensive</p>	<p>See additions to introduction.</p> <p>A statement on the limitations of the study has been added at the end of discussion.</p> <p>See amendments made to the methodology.</p> <p>A valuable comment based on finding was made in the conclusion. Fig 4 – see addition to discussion.</p> <p>Many thanks for your observations & corrections.</p>
