<ol style="list-style-type: none"> 1. Statistical analysis is very simple, I recommend using panel data analysis instead of Multiple Regression Analysis. 2. The value added to the knowledge does not exist. 3. There is confusion between discussion, results and conclusion. 	<p>I am to inform that in my article certain objectives are mentioned and the same are studied by using the suitable statistical techniques. The changes in the techniques used or further addition to the study may not be possible.</p>
