EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>First, sub-topic suppose "research venue" not "search location" in page 2, part 2.1.</p> <p>Second, it not strong enough to have only one (1) parameter study, at least three (3) should be well-discussed.</p> <p>Once an appropriate discussion achieved, there would be better in concluded the whole work done.</p>	<p>Correction performed as requested.</p> <p>The study was conducted first with a parameter because the institution has not yet purchased the equipment needed to conduct the complete research, we are waiting. Brazil is going through a political and economic crisis and the education institutions are suffering cuts by the government, without financial resources to carry out all the research.</p> <p>Turbidity is one of the most important parameters to be studied in the alternative water treatment, for this reason the study was carried out first with it.</p> <p>The conclusion was evaluated as correct by other evaluators; the authors consider that it is consistent with the objectives of the study and with what was performed.</p>
