**SDI Review Form 1.6**

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	The paper develops experimentally the effects of smoking exposure to some biomedical parameters. The results obtained are worthy of mention and, therefore, the paper can be accepted for publication by some minor changes. My personal opinion is the study parameters should be compared also with atherosclerosis pathology, being this pattern often associated with biometabolic involvement (See: risk factors, atherosclerosis, biochemical markers!)	Actually, it will be good to add this aspect to the paper, but due to the original design of the study, it won't be possible for now. The reason being that the work has been done and Atherosclerosis evaluations need to be done during the experimental process  Authors comment.
<b><u>Minor</u></b> REVISION comments	Reported in compulsory revision.	
<b><u>Optional/General</u></b> comments	Good paper.	Thanks for that comment The Authors
