PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The manuscript refers to a survey of the avifauna in a forest reserve in Nigeria. The survey was conducted in two forest types in dry and wet season and differences in the richness, composition and abundance of bird species were evaluated. The introduction is not an introduction, it is the description of the study area, it does not introduce the theme. I suggest that the authors read other articles and analyse how they are structured. There is some incomplete information in the analysis and results section, as well as repeated information in the text and results tables. The discussion can be improved with more recent citations and more references. The conclusions should be based on the results of the study. I recommend that the authors read the comments in the manuscript. If this is the first survey of birds in the reserve the authors should reinforce the importance of the study based on this aspect. So the text can improve a lot.	
Minor REVISION comments		
Optional/General comments
