General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Theme is relevant. Good data gathering. Minor grammatical and style revision needed. Suggest review by native English speaker.</p> <p>Table 1 shows percentage of ED related to the total studied populations but it does not show the percentage of ED within that population. You cannot say "28.4% of elderly men had ED." Of the total populations 28.4 were elderly man with ED. Actually 40% of the elderly man had ED (29 patients out of a total of 49 elderly man). The percentage of ED within an age group should expressed related to the total of patients in that age group (Fig1)</p> <p>Did not understand table 3, How was the patient without ED was classified as severe, moderate mild ED, what criteria was used? (self-reporting of ED is not described in methods)</p> <p>Discussion" The finding of ED being more prevalent (42.2%) among men aged 40 to 59 years followed by age range 18-39 years and least common in the elderly was seen as a new trend as ED is generally reported to be higher among the elderly" – see comment above</p> <p>Suggest review by statistician</p>	
Minor REVISION comments	<p>Figures 2, 3 4 are unnecessary and can be only described in the text</p> <p>Discussion: "France the prevalence of ED prevalence"</p>	
Optional/General comments
