SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The author should know that the precise statistical preparation of the RCT must taking account of the selection criteria and the power needed to obtain valuable results this was not the case here</p> <p>A sufficient sample size is fundamental to detect a reliable statistical difference among the study groups. The sample size needed to reach an adequate power in a study is inversely proportional to the intervention effect squared how was this done?</p> <p>It is important to note that an insufficient sample size is a frequent problematic issue in several published RCTs.</p> <p>A key aspect of RCTs is the method of randomization. Random allocation of patients in the study or in the control group assures that all participants' known and unknown characteristics are similar and balanced between groups at the beginning of RCT</p> <p>NOT A GOOD RESEARCH STUDY but the inspiration was good. The author need to know more about the following</p> <ol style="list-style-type: none"> 1) Good food balance diet and life modification will perform better than the melatonin avoiding excessive alcohol that is what we do over here. 2) HIV drugs and some of the side effect the drug ZIDOVUDINE should not be used as the first line drug. If Lesotho is almost at the point of doing away with the drug Brazil should look critical into this? 3) The selected participant was their alcoholic habit studies 4) TDF/3TC is use in the management of hepatitis 5) Was any of this patient known diabetic or on medication for medication 6) The natural occurring Melatonin in our system is it a disadvantage or an Advantage? <p>How the sample size calculated or the author was just used the number of available participant present at the institution?</p>	
Minor REVISION comments	<p>The author need to know what Literature review / Introduction is all about in research study (A literature review is "a critical summary and assessment of the range of existing materials dealing with knowledge and understanding in a given field you are dealing with) Melatonin and HIV drugs and the Virus) Proper study was not done.</p> <p>Does the author think that socio economic condition of the participant play any part in the outcome of the study?</p>	
Optional/General comments	Most of the fact under the discussion should be moved to literature review section	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
