

**Editor's Comment:**

I have considered the manuscript 2018/AFSJ/45733. I observed in addition to the remarks of the reviewers, the presence of important mistakes.

-I noted in the results, that standard deviations values are higher than their corresponding values, like for the fat composition of *Ceiba pentandra* and *Portulaca oleracea* in table 1a. The same problem exist in the Mineral composition in table 2a, for example Zn composition in *Cola gingatean*, *Sterculiar spp* and *Boerhavia diffusa* and also Mn for *Cola gingatean*. I suggest that all the results must be carefully checked and essentially for low values.

-The discussion must be improved.

-References must be updated

The manuscript still needs revision and need to be improved, it is not yet suitable for publication in Asian Food Science Journal.
