

Editor's Comment:

I am pleased to send you (Below) my editorial comment and recommendation for this article.

Awaiting these 2 Minors and Rapid revisions to improve the article for the Journal.

The editorial evaluation of the article entitled "Evaluation of Antimalarial Properties of Ficus Platyphylla Del Leaf Extract in Mice" is now completed.

One reviewer suggested giving more detail on the Figures and the authors replaced the Figures by the Tables that show a little more detail.

But for me and to improve this article, I suggest 2 Minor and Rapid revisions before acceptance :

1- It is of the most interest to show the 2 (Figures and Tables) together to complement each other visually for the readers: for example (Table 3, Figure 3) and as seen in some

important Journals.

2- It is also of the most interest to update the references and add some recent references to improve the bibliographic state of the paper for the Journal.
