

Editor's Comment:

From my point of view an important issue is English editing. The authors seems to be non-native English speakers. Professional English editing would contribute to get a better paper.

For example, I do not understand what the authors want to say in the first phrase of the section Conclusions "At the end of this study on the evolution and the comparison of the receipts of the real tax on the motorized vehicles (labels)", the aim in view was to release the evolution of the real tax on the motorized vehicles of the Province of Tshopo during the period of 2012 to 2016, recovered by the General Direction of the Receipts of the Province of Tshopo. " And there are also, other phrases like that.

Secondly, I recommend to the authors to highlight better the personal contributions to existing literature.

Thirdly, why it is important the analyzed period?

And not the last, also I agree with one of the reviewers that the title is too long, and in order to be published I suggest to review the title.
