

Editor's Comment:

This is a good research paper, Nowadays all are taking very harmful medicines which cause side effects among the people. So all should know the compounds mixed and related complications before taking them. This paper could give awareness regarding that.

Hence i also recommend this paper can publish in our journal.

But still i suggest that to correct sentence which is highlighted in blue colour in meaningful way.

Aim: To determine whether Phenylthiocarbamide PTC taste blindness was associated with type 2 Diabetes Mellitus (DM) and possible relationship between intake of treatment medications and PTC taste sensitivity.
