

Editor's Comment:

I have gone through the manuscript. However, I think some moderate revisions are still needed to improve the quality of this manuscript.

1. What is the unit "mg dm⁻³", generally it should be mg/kg for TN, TP etc.
2. The discussion is too weak. The authors should cite and review some international references to support your findings.
3. In the Conclusion section. What are the implications for management? What is your further study plan in the future?
